

PHYU HAN THWE

Junior DevOps / Cloud Engineer

Bangkok, Thailand | +66 123-123-1234 | phyuhanthwe789@gmail.com | linkedin.com/in/phyuhanthwe | github.com/phyuhanthwe | Open to Thailand, Singapore, Vietnam

PROFESSIONAL SUMMARY

Final-year IT student and entry-level DevOps/Cloud Engineer with hands-on experience in cloud infrastructure, CI/CD, Linux systems, backend APIs, and data engineering. Built AWS projects using Terraform, Docker, EC2, VPC, IAM, CloudWatch, GitHub Actions, OIDC authentication, and PostgreSQL. Internship experience includes Linux-based Hadoop cluster support, REST API development in Go, MongoDB/Cassandra data modeling, and DevOps/backend support. Seeking entry-level DevOps, Cloud, Infrastructure, Platform, or Cloud Support roles across Thailand, Singapore, and Vietnam.

CORE TECHNICAL SKILLS

Cloud & Infrastructure: AWS EC2, VPC, IAM, S3, CloudWatch, CloudFormation, Linux servers, networking basics

Infrastructure as Code: Terraform, Terraform Cloud, reusable modules, remote state, VPC/EC2 provisioning

DevOps & CI/CD: Docker, GitHub Actions, GitLab CI, Git, Docker Hub, CI/CD workflows, OIDC authentication

Programming & Scripting: Python, Bash, SQL, Go fundamentals from API internship

Databases & Data Systems: PostgreSQL, MySQL, MongoDB, Cassandra, Hadoop, ETL support

Currently Preparing: Kubernetes, Ansible, AWS Solutions Architect Associate

PROFESSIONAL EXPERIENCE

DevOps / Backend Engineer Intern | Jumbo Jumps | May 2026 - Present

- Support DevOps tasks and infrastructure operations for internal application development and deployment workflows.
- Develop a Jira-like task management web application, contributing to backend features, task workflow logic, and deployment readiness.
- Assisted with application deployment on Linux servers, including environment setup, logs, and basic troubleshooting.
- Supported CI/CD and infrastructure tasks using GitHub Actions, Docker, and shell scripts.

Data Engineer Apprentice | Ooredoo | Mar 2024 - May 2024

- Provisioned and managed Hadoop clusters on Linux for large-scale telecom ETL pipelines, supporting reliable data processing operations.
- Wrote MySQL queries and optimized database schemas to support analytics reporting and operational data access.
- Documented runbooks and recurring issue notes to help reduce repeated errors and improve team troubleshooting consistency.

Backend API Developer Intern | Galaxie AI | Oct 2023 - Jan 2024

- Built and deployed RESTful APIs in Go to Linux production servers, supporting delivery of the company's AI product features.
- Designed MongoDB and Cassandra data models for high-throughput inference workflows and application data access.
- Triaged bugs across staging and production environments; reviewed GitHub pull requests and supported code integration.

Product Owner | SSP Venture | Jun 2022 - Jan 2023

- Coordinated engineering and third-party partner teams, translating technical constraints into delivery requirements across concurrent projects.
- Managed timelines, dependencies, and communication between technical and non-technical stakeholders.

SELECTED PROJECTS

End-to-End DevOps Pipeline on AWS | Terraform, GitHub Actions, AWS EC2/VPC/IAM, Docker, PostgreSQL, Linux

- Automated CI/CD pipeline using GitHub Actions and Docker for continuous testing, image build, and delivery to Docker Hub on every push.
- Provisioned AWS infrastructure with Terraform, including VPC networking, EC2 compute, security groups, and OIDC-based authentication instead of long-term static credentials.
- Deployed a containerized application with PostgreSQL on EC2 and automated environment bootstrapping with user_data for repeatable setup.
- Designed the project for scalable future enhancements such as load balancing, auto scaling, managed database, and monitoring integration.

Cloud Infrastructure with Terraform | AWS, Terraform Cloud, EC2, VPC, Security Groups, Docker, Nginx

- Created reusable Terraform configuration for AWS networking and compute resources, replacing manual console setup with repeatable infrastructure provisioning.
- Restricted SSH access by CIDR and exposed only required HTTP traffic, demonstrating basic cloud security and network access control practices.
- Integrated Terraform Cloud with GitHub VCS for remote state management and pull request plan previews.

EDUCATION

Southeast Bangkok University, Thailand | B.Sc. Information Technology, GPA: 3.82/4.00 | Expected Dec 2026

NCC Education, UK Accredited | Level 5 Diploma in Computing with Business Management | 2023 - 2025

CERTIFICATIONS & LANGUAGES

Certifications: DevOps with Docker - University of Helsinki; AWS Academy Cloud Foundations; Big Data Platforms - University of Helsinki

Languages: English - EF SET Professional Working Proficiency; Burmese - Native
